

**B. E.**  
**in**  
**FOOD TECHNOLOGY**

(APPLICABLE FOR STUDENTS ADMITTED FROM THE ACADEMIC YEAR  
2021-2022 ONWARDS)

**SCHEME & SYLLABUS**

**खाद्य अभियांत्रिकी एवं प्रौद्योगिकी विभाग**  
**Department of Food Engineering and Technology**  
**संत लौंगोवाल अभियांत्रिकी एवं प्रौद्योगिकी संस्थान**  
**M SANT LONGOWAL INSTITUTE OF ENGINEERING AND TECHNOLOGY**  
**(भारत सरकार, शि. म. के अधीन, सम विश्वविद्यालय)**  
**(Deemed to be University under MoE, Government of India)**  
**लौंगोवाल - १४८१०६, संगरूर (पंजाब) भारत**  
**Longowal -148106. Sangrur (Punjab) India**

### **VISION OF THE DEPARTMENT**

To be a centre of excellence in training, research, outreach and consultancy services in food engineering and technology with emphasis on value addition of agricultural produce, food bioprocessing and technology, food nutrition, food quality and safety.

### **MISSION OF THE DEPARTMENT**

1. To produce trained technical manpower of highest standard in the field of food engineering and technology
2. To re-orient and develop safe food products by applying fundamental and applied technologies
3. To provide solutions to the problem and leadership in the area of education, training and research

### **PROGRAM EDUCATIONAL OBJECTIVES (PEO)**

1. To develop the ability to apply the knowledge of Science, Mathematics, Computing and basic Engineering fundamentals to make students capable to analyze, interpret and design.
2. To develop the capability to apply latest engineering tools and techniques in Food processing with respect to social and global framework.
3. To create competent Professionals inculcated with leadership qualities and ethical responsibilities.
4. To develop the ability to communicate proficiently and work in a multidisciplinary team and competitive environment.
5. To build up the knowledge of current issues and capability to engage in life-long learning process and enable the students in totality to start-up their own business organizations or work as leaders in food industries.

**PROGRAM OUTCOME (PO)****Engineering Graduates will be able to:**

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues, and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and teamwork:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

- 11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning:** Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### **PROGRAM SPECIFIC OUTCOME (PSOs)**

PSO1: Graduates having an ability to identify, analyse and solve technical problems relating to food systems together with allied streams.

PSO2: Graduates will be able to build the nation, by imparting technological inputs and managerial skills to become technocrats, entrepreneurs and will be able to develop new concepts on various emerging fields and pursue advanced research.

Title of the course : **Food Chemistry**

Subject Code : **PCFT - 511**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course Objective:** Objective of this course is to impart knowledge about

- To develop an understanding of how individual food components contribute to the overall quality of foods during processing and storage.
- To provide an understanding of the chemical changes that take place with food components during processing and storage and their effects on sensory and nutritional quality, functional properties, and safety of foods.
- To familiarize the student with common analytical and experimental methods used in the study of the food components, food safety and food control.
- To examine the basis of food chemistry-related issues in food safety, regulation and current events.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Explain about chemical composition and structure of macro- and micro-constituents of food and their functions in foods quality control	Understanding
<b>CO2</b>	Describe physicochemical aspects of food constituents and their interaction with food	Understanding
<b>CO3</b>	Elaborate the role of nutrients in different food product stability, and effect of processing	Understanding
<b>CO4</b>	The students will be able to elaborate the role of nutrients in different food product stability, and effect of processing	Applying
<b>CO5</b>	Evaluate impact on food constituents during food processing along with analytical technique, principles and methodology for their estimation and quality analysis/control	Applying

**Mapping of Course Outcome and Program Outcome:**

Unit	Main Topics	Course Outlines	Lecture (s)
<b>I</b>	<b>Introduction</b>	Developments in food chemistry and role of food chemist in food processing and preservation, food control, safety and adulteration prevention.	<b>3</b>
	<b>Water</b>	Importance of water in foods. Structure of water & ice. Concept of bound & free water and their implications. Water activity: Principles, measurement, control, effects, related concepts, water migration and basis for food preservation, Sorption isotherms, Dispersed systems in food	<b>6</b>
	<b>Proteins</b>	Classification, structure, chemistry. Physical and chemical characteristics of amino acids and proteins. Isolation and purification of amino acids, peptides, proteins. Qualitative and quantitative analysis of amino acids and proteins. Effects of food processing: changes occurring in chemical, functional & nutritional properties of proteins. Roles of proteins in food structure, color, flavor, and texture	<b>12</b>
	<b>Lipids</b>	Structure, classification, physical and chemical properties, Utilization of fats and oils in margarine, shortenings, salad and cooking oils. Importance of fats and oils in food product development and diet. Roles of lipids in food structure, color, flavor, and texture.	<b>8</b>

<b>II</b>	<b>Carbohydrates</b>	Classification, structure. Physical and chemical properties and functions of saccharides (Sugar derivatives, oligosaccharides, starch, hemi-cellulose and pectic substances). Dietary fiber: components, properties, analysis. Changes in carbohydrates during processing. Roles of carbohydrates in food structure and texture.	<b>10</b>
	<b>Browning reactions</b>	Enzymatic and non-enzymatic browning reactions and their influence on color, flavor, and texture of raw and processed food, control of browning reactions.	<b>6</b>
	<b>Vitamins</b>	Sources, types, chemistry and functions. Effect of processing and control	<b>6</b>
	<b>Plant pigments</b>	Structure, sources, importance and properties of chlorophyll, anthocyanins, carotenoids, flavanoids, and myoglobin. Chemical changes during processing and control	<b>6</b>
	<b>Flavor and aroma of foods</b>	Theory of flavour and taste. Importance and techniques of retention of flavour and aroma in foods.	<b>5</b>
<b>Total</b>			<b>61</b>

**Books Recommended:**

<b>Author</b>	<b>Title</b>

2. Fenemma	Food Chemistry
3. Belitz	Food Chemistry
4. Lee	Basic Food Chemistry
5. Lehninger	Principles of Biochemistry

Title of the course : **Food Microbiology**

Subject Code : **PCFT - 512**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Food microbiology and microorganisms
- Various techniques in handling of microorganisms
- The role of microorganisms in the production of various food products
- The association of microorganisms in food spoilage and their control

**Course Outcomes:** On successful completion of the subject, the students will be able to

<b>CO1</b>	Discuss the morphology, structure and reproduction of Microorganism	Understanding
<b>CO2</b>	Recognize the Microbial growth and death kinetics and apply the techniques of pure culture.	Applying
<b>CO3</b>	Explain the Microbiology and Microbial spoilage of Food products.	Understanding
<b>CO4</b>	Describe spoilage microorganism, toxin produced and there effect on Human.	Understanding
<b>CO5</b>	Implement the knowledge of various methods for Microbial Control	Applying

Title of the course : **Heat and Mass Transfer**

Subject Code : **PCFT-513**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course Objectives:** Objective of this course is to impart knowledge about

- The basic understanding to the various modes of heat transfer, mechanisms of boiling and condensation which are fundamental to food processing operations.
- The concepts of unsteady heat transfer, a predominant phenomenon of heat transfer in food processing.
- The concepts of design of heat exchangers for a given heat load used in food industry.
- The concepts of steady and unsteady mass transfer, predominant phenomena in food processing operations.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Interpret the principle of conduction and convection heat transfer in food processing.	Applying
<b>CO2</b>	Explain the boiling and condensation phenomenon on various geometrical surface.	Understanding
<b>CO3</b>	Describe the principle of radiation heat transfer.	Understanding
<b>CO4</b>	Execute the knowledge of heat transfer to design heat exchanger	Applying
<b>CO5</b>	Explain the concept of steady state and unsteady state mass transfer	Understanding

Unit	Main Topics	Course Outlines	Lecture (s)
<b>I</b>	<b>Conduction heat transfer</b>	Modes of heat transfer, Steady state unidirectional heat transfer with and without internal heat generation through slab, cylinder, spheres and composite geometries; insulation and its purposes, critical thickness of insulation for cylinders and spheres, Unsteady state heat transfer in simple geometry; Use of Heisler charts, Gaussian error function to solve transient heat transfer problems.	<b>12</b>
	<b>Convection Heat Transfer</b>	Natural and forced convection, dimensional analysis for free and forced convection, dimensionless numbers used in convective heat transfer, important correlations for free and forced convection	<b>5</b>
	<b>Boiling and condensation</b>	Boiling phenomenon, hysteresis in boiling curve, nucleate and forced convection boiling; condensation phenomenon, condensation on vertical surface, outside a tube and inside horizontal tube.	<b>5</b>
<b>II</b>	<b>Radiation heat transfer</b>	Characteristics of black, grey and real bodies in relation to thermal radiation, Stefan Boltzmann law; Kirchhoff's law; Wein displacement law, Emissive power for a black body and real body, intensity of radiation, radiation between two bodies.	<b>5</b>
	<b>Heat Exchanger</b>	Classification, overall heat transfer coefficient, fouling factors, log-mean temperature difference for parallel and counter flow heat	<b>5</b>

	exchangers, effectiveness of parallel and counter flow heat exchanger by NTU method, Design of shell and tube heat exchanger.	
<b>Mass Transfer</b>	Introduction to mass transfer, different modes of mass transfer, Mass flux and molar flux for a binary system, Fick's law of diffusion of mass transfer, Derivation of general diffusion mass transfer equation, Molecular diffusion in gases, liquids and solids having steady state equimolar counter diffusion and through non diffusing body; Steady state equimolar counter diffusion, convective mass transfer coefficient, natural and forced convective mass transfer, dimensional analysis for free and forced convective mass transfer, important correlations of convective mass transfer; permeability of films and laminates. Unsteady state diffusion in slabs, cylinders and spheres, transient mass transfer in semi-infinite medium.	<b>12</b>

Title of the course : **Heat and Mass Transfer Lab**

Subject Code : **PCFT - 514**

L	T	P	Credits	Weekly Load
0	0	2	1	2

**Course Objectives:** Objective of this course is to impart knowledge about

- The theory of heat transfer mechanisms during the heating/cooling of bio-materials.
- The concepts of unsteady heat transfer for determination of process time and temperature profiles in various geometries of the biomaterials.
- Designing calculations for various types of heat exchangers and their comparison in terms of effectiveness.
- The concepts of steady and unsteady mass transfer operations in practical form.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Demonstrate the different modes of modes of heat transfer in various processing operations.	Applying
<b>CO2</b>	Experiment to calculate various parameter in steady state heat transfer,	Analyzing
<b>CO3</b>	Demonstrate to the examine rate of heat transfer and effectiveness for the various heat transferring equipments like heat exchangers, HTST pasteurizer etc	Applying
<b>CO4</b>	Experiment the application of mass transfer in various processing operations	Analyzing
<b>CO5</b>	Conclude the findings of experiments	Analyzing

**List of Practicals:**

- To find the thermal diffusivity of a food material during heat/cooling.
- To find out the Overall heat transfer co-efficient for a viscous food material assuming negligible internal thermal resistance (lumped heat capacity system).
- To find out the temperature profile and rate of heat transfer from a rectangular/cylindrical/spherical body losing heat to the surrounding by use of Heisler and correction factor chart.
- To calculate the surface and centre temperature of a rectangular/cylindrical/spherical body losing heat to the surrounding by use of Heisler and correction factor chart.
- To determine surface heat transfer coefficient for a vertical tube losing heat by free convection.
- To determine surface heat transfer coefficient for pipe losing heat by forced convection.
- Determination of overall heat transfer coefficients for unsteady state heating process
- To determine LMTD, rate of heat transfer and effectiveness by NTU method for parallel flow double pipe heat exchanger.
- To determine LMTD, rate of heat transfer and effectiveness by NTU method for counter current flow double pipe heat exchanger.
- To determine the moisture diffusivity and activation energy for different geometries of food materials having rectangular/cubical/ cylindrical/spherical geometry.
- To study the behaviour of boiling curve
- To study the mechanism of mass flux during the film-wise and drop-wise condensation.

Title of the course : **Food Chemistry and Microbiology Lab**

Subject Code : **PCFT - 515**

L	T	P	Credits	Weekly Load
0	0	2	1	2

**Course Objectives:** Objective of this course is to impart knowledge about

- The chemistry underlying the properties and reactions of various food components.
- Principle working of food analytical and food microbiological equipments.
- The different analytical and microbiology techniques related to food testing and control
- The experimental handling of techniques of food quality and analysis on the basis of chemical and microbiological methods.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Handle the equipment independently	Applying
<b>CO2</b>	Learn principles behind analytical techniques associated with food.	Applying
<b>CO3</b>	Learn the techniques of microbiological study and culturing	Applying
<b>CO4</b>	Obtain knowledge about the various methods of analysis for food	Applying
<b>CO5</b>	Check the microbial load of food samples, learn to access the quality standard of food samples	Applying

### List of Practicals:

1. To study the working of various equipments related to food chemistry and microbiology.
2. Qualitative estimation of carbohydrates in the given food sample.
3. Study of browning reaction and inhibition of browning reaction.
4. Determination of acid value, RM value and Polenske value of given oil or fat sample.
5. Estimation of amount of fat in the given food samples.
6. Estimation and study of protein by Kjeldhal, electrophoresis methods.
7. Estimation of pectic substances and pectin in fruit.
8. Determination of vitamins in foods.
9. To perform Gram staining technique of bacteria.
10. To measure the size of a given microbial cell using a micrometer.
11. To enumerate total viable count in a culture.
12. To study the growth curve of microorganisms.
13. To isolate pure culture using different techniques.
14. Quantitative analysis of food sample by standard plate count (SPC) method.
15. To study quality of milk by methylene blue reduction (MBRT) test.
16. To perform presumptive test for coliforms in milk.

Title of the course : **Biology for Engineers**

Subject Code : **BSBL - 501**

L	T	P	Credits	Weekly Load
2	0	0	2	2

**Course Objectives:** Objective of this course is to impart knowledge about

1. The basic organization of organisms and subsequent building to a living being.
2. The machinery of the cell functions that is ultimately responsible for various daily activities.
3. The application of engineering principles in biology.
4. Biological problems that requires engineering expertise to solve them.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Explain biological engineering principles, procedures needed to solve real-world problems.	Understanding
<b>CO2</b>	Explain the fundamentals of living things, their classification, cell structure and biochemical constituents.	Understanding
<b>CO3</b>	Comprehend genetics and the immune system and learn the techniques of microbiology study, food spoilage and preservation.	Understanding
<b>CO4</b>	Classify the biomolecules as building blocks of biological subjects.	Applying
<b>CO5</b>	Define the role of enzymes in biological system and identify the application of enzymes in different food industry	Understanding

Unit	Main Topics	Course Outlines	Lecture (s)
<b>I</b>	<b>Introduction</b>	Importance of biology in engineering, development of technological subjects imitating nature's biological entity, major discoveries in biology, economic aspects of biology in exploitation.	<b>2</b>
	<b>Classification</b>	Concept of scientific classification of living entity, discuss the classification (with suitable example) based on: (a) cellularity- unicellular and multicellular (b) ultrastructure- prokaryotes and eukaryotes (c) energy and carbon utilization- autotrophs, heterotrophs and lithotrophs (d) ammonia excretion- aminotelic, uricotelic and ureotelic (e) molecular taxonomy- three major kingdoms of life, classification of microorganisms based on: (a) temperature (b) salt concentration (c) oxygen requirement	<b>3</b>
	<b>Genetics</b>	Concept of genetics, Mendel's laws, segregation and independent assortment, allele, meiosis, and mitosis, recessiveness and dominance, how genetic material	<b>4</b>

		passes from parent to offspring, difference between phenotypic and genotypic characteristics, DNA fingerprinting, exploitation of genetics in crop improvement and microbial potential towards fermentation/ fermented product.	
	<b>Microbiology</b>	Microorganisms, classification of microorganisms, techniques such as serial dilution, pour plating, streak plating, spread plating, nutrient agar and broth. Techniques for enumeration of bacteria, growth kinetics, concept of food spoilage and preservation technique.	<b>3</b>
<b>II</b>	<b>Biomolecules</b>	Biomolecules as building blocks of biological subjects, introductory information about carbohydrates, proteins, nucleotides, and DNA/RNA, structure of protein (primary, secondary, tertiary, quaternary), structure of selected monosaccharides (glucose, fructose), disaccharides (sucrose, maltose) and polysaccharides (starch, cellulose).	<b>4</b>
	<b>Enzymes</b>	Enzyme, enzymology, role of enzymes in biological system, mechanism of enzymatic action, role of prosthetic group, co-factor and co-enzymes in enzymatic reactions, classification of enzymes, application of enzymes in: (a) juice clarification (b) meat tenderization (c) enzymatic browning.	<b>4</b>
	<b>Metabolism</b>	Concept of thermodynamics and application in biological system, photosynthesis, glycolysis, Krebs cycle, exothermic and endothermic reactions, endergonic and exergonic reactions.	<b>4</b>

**Books Recommended:**

1. Neil A. Campbell	Biology: A global approach
2. Eric E Conn	Outlines of biochemistry
3. Prescott	Microbiology
4. Gunther S. Stent	Molecular genetics

Title of the course : **Food Biotechnology**

Subject Code : **PCFT - 522**

L	T	P	Credits	Weekly Load
4	0	0	4	4

**Course Objectives:** Objective of this course is to impart knowledge about

- The basic understanding about food biotechnology and its applications.
- The microbial production of the different food products.
- The fundamentals of gene cloning techniques and its applications.
- The different wastes generated from the food industry and its treatment.

**Course Outcomes:** On successful completion of the subject, the students will be able to

<b>CO1</b>	Describe the importance of biotechnology in food technology and microbial production of Single cell Protein	Understanding
<b>CO2</b>	Discuss the microbial production of organic Acids, vitamins, and bio pigments	Understanding
<b>CO3</b>	Explain about various enzyme, purification, and their application in food industry	Applying
<b>CO4</b>	Discuss about basics and terms related to Plant tissue culture, Genetic Engineering and Genetically modified food.	Understanding
<b>CO5</b>	Describe the biotechnological methods used in food industry waste management.	Understanding

3	1	0	4	4

**Course Objectives:** Objective of this course is to impart knowledge about

- The concept of SI system and the conversion from one system to another.
- Application of the fluid flow, heat and mass transfer principles to analyze and design food processes
- The theory and application of basic engineering operations.
- Engineering principles and practical applications of food processing techniques useful for increase shelf life of food products

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Apply the principles of mass and energy balance to food processing systems.	Applying
<b>CO2</b>	Determine thermal processing time for pasteurization / sterilization.	Applying
<b>CO3</b>	Interpret psychometric charts to determine seven properties of air and its applications in drying, humidification, etc operations.	Applying
<b>CO4</b>	Explain types, construction, designs and working principle of evaporators.	Understanding
<b>CO5</b>	Determine the freezing time of food and discuss different types of freezer.	Applying

Title of the course : **Food Engineering Lab**

Subject Code : **PCFT - 524**

L	T	P	Credits	Weekly Load
0	0	2	1	2

**Course Objectives:** Objective of this course is to impart knowledge about

- Applications of fundamentals of food engineering operations
- The practical application of processes involving simultaneous heat and mass transfer operations.
- The concepts involved in the preservation of food materials by the application of heat, cooling, freezing operations.
- The concepts involved in the design of apparatus meant for preservation of food by concentration like evaporators, multiple effect evaporators, spray dryer, drum dryer etc.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Demonstrate the thermal process time and freezing time calculation of a given food material.	Applying
<b>CO2</b>	Experiment to determine air properties after drying and air conditioning.	Analyzing
<b>CO3</b>	Examine the drying and dehydration behavior of different bio-materials with different geometries.	Applying
<b>CO4</b>	Determine various characteristics Thermal processing, Freezing, Evaporation, drying and dehydration.	Analyzing
<b>CO5</b>	Conclude experiment result and present clearly through reports.	Analyzing

**List of Practicals:**

1. To find out the D.F.Z value for a heating process meant for inactivation of microorganisms.
2. Calculation of thermal process time by formula method
3. Calculation of thermal process time by graphical method
4. Determination of steam properties using Mollier diagram
5. Determination of steam properties using steam tables
6. Determination of Boiling point elevation
7. Design of multiple effect evaporator
8. Determination of relative humidity and other thermodynamic properties of air using psychrometric chart
9. Study the drying characteristics of a food material during convective dehydration
10. Determination of moisture diffusivity of a food material during dehydration.
11. Determination of activation energy for dehydration of a food sample.
12. Comparison of freeze drying time determined by experiment and from modified Plank's equation
13. Determination of freezing point depression of a food material.
14. Study of freezing curve for pure water and a food material.
15. Determination of the freezing time for a given food sample using Heisler charts or unsteady state heat transfer solutions

Title of the course : **Food Biochemistry and Nutrition and Biotechnology Lab**

Subject Code : **PCFT - 525**

**List of Practicals**

1. To study different equipments related to biotechnology.
2. Preparation of various media for culturing of microbes.
3. To study the effect of pH on the growth of microorganisms.
4. To study the production of an enzyme by given organism.
5. To study the disruption of cells using mechanical method.
6. Estimation of enzymatic activity of given enzyme.
7. To study the production of ethanol by given organism.
8. Microbial production of organic acid.
9. Estimation of total sugars and reducing sugars in a given food sample.
10. Estimation of ascorbic acid in a given food sample.
11. Estimation of protein by Lowry method.
12. Estimation of phosphatase activity in a milk sample.
13. Estimation of nutritive value of given food sample.
14. Estimation of calorific value by Bomb calorimeter.
15. To determine Biochemical Oxygen Demand of a given sample.
16. To determine Chemical Oxygen Demand of a given sample.

Title of the course : **Technology of Animal Products**

Subject Code : **PCFT - 611**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The important biochemical and ultra-structural changes that take place post-mortem during conversion of muscle to meat.
- The factors that affect the safety and quality of meat products.
- The technological and commercial issues related to the processing of meat, egg, and fish.
- The manufacture, handling and storage of fish and meat and products thereof assesses safety and quality requirements for fish and meat products.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Describe the role of various compositional components in the development of various meat, poultry and fish products.	Understanding
<b>CO2</b>	Discuss slaughter techniques and hygienic handling of raw meat	Understanding
<b>CO3</b>	Use the knowledge to develop various value-added meat products.	Applying
<b>CO4</b>	Explain various formulations and processing procedures to produce quality product.	Understanding
<b>CO5</b>	Discuss about the various food standards in relation to meat, fish and poultry.	Understanding

Title of the course : **Dairy Technology**

Subject Code : **PCFT - 612**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Milk composition and its various properties and different adulterants.
- Working of equipment and process technology for various milk products.
- Process technology for milk powder and fermented milk products
- Cleaning and sanitation of dairy industry.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Discuss about current status of dairy industry in India and composition & properties of milk.	Understanding
<b>CO2</b>	Implement the technology of fluid milk and manufacturing fat rich milk-based products.	Applying
<b>CO3</b>	Interpret the technological aspects in manufacturing of frozen, concentrated and dried milk products.	Applying
<b>CO4</b>	Use the technology to manufacture the fermented milk based and indigenous products.	Applying
<b>CO5</b>	Explain the cleaning & sanitization procedures and working principles of related operations and equipment's.	Understanding

Title of the course : **Animal Product and Dairy Technology Lab**

Subject Code : **PCFT - 613**

L	T	P	Credits	Weekly Load
0	0	2	2	4

**Course Objectives:** Objective of this course is to impart knowledge about

- The different in structure of various animal tissues
- The various physico-chemical, platform test of milk, and analysing the milk and meat products for their quality.
- Various unit operation / working of different milk and meat processing equipments.
- Preparation of various milk and meat products.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Estimate various physico-chemical properties of milk and meat.	Applying
<b>CO2</b>	Estimate the platform test of milk to judge the milk quality at reception	Applying
<b>CO3</b>	Handle various equipments involved in milk and meat processing and develop products	Applying
<b>CO4</b>	Examine effect of processing on quality of milk and meat product	Analyzing
<b>CO5</b>	Conclude the experimental result and present clearly through reports	Analyzing

**List of Practicals:**

- To analyze milk sample for following parameters.  
Percent Acidity & pH, Specific gravity, Total solids & SNF, Fat, COB and Alcohol test.
- Lactose determination in milk
- To study cream separation and functions of various parts of cream separator.
- To study the effect of temperature and pressure on homogenization.
- To observe the effect of pasteurization on milk quality
- To analyze milk powder sample for various parameters.
- Analyzing condensed milk for various parameters.
- To prepare paneer and to examine their quality parameters
- Preparation of ice-cream.
- To analyze the butter for its quality.
- To study the effect of low and high oxygen atmosphere on meat color.
- To study the structure of the muscle under compound microscope.
- To perform the slaughtering of the poultry birds.
- Identification of different internal organs of poultry birds and their utilization.
- To perform filleting and steaking of fish.
- Determination of total volatile acids in fish products

Title of the course : **Technology of Cereal, Pulses and Oilseeds Processing**

Subject Code : **PCFT-621**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course Objectives:** Objective of this course is to impart knowledge about

- Basic understanding of cereals, pulses and oilseeds after harvesting.
- Various types of processing methods of cereals, pulses and oilseeds
- various products and by-products of cereals, pulses and oilseeds
- Detailed manufacturing technologies of cereals, pulses and oilseeds consumed in daily life in food industries.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

CO 1	Understand the composition, structure and storage of food grains	Understanding
CO 2	Understand the technology of paddy processing and its products	Understanding
CO 3	Understand the traditional and modern milling operations of wheat and technology of bakery and extruded products	Understanding
CO 4	Understand the processing of coarse cereals and legume-pulses and their value-added products	Understanding
CO 5	Understand the processing of oil & oilseeds and utilization of their by-products	Understanding

**Mapping of Course Outcome and Program Outcome:**

Title of the course : **Technology of Fruits and Vegetable Products**

Subject Code : **PCFT - 622**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Post-harvest changes in fruits and vegetables, causes of post-harvest losses of fruits and vegetables for effective handling and minimizing the post-harvest losses.
- The unit operations and calculations involved in the processed fruits and vegetable products
- The technology of processed fruits and vegetable products
- The problems involved in processed fruits and vegetable products line and able to solve the associated problems.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

CO1	Describe the physiological changes in fruits after harvesting	Understanding
CO2	Explain the factors affecting the shelf life of fresh fruits and vegetables	Understanding
CO3	Explain the role and importance of preservation techniques to improve the shelf life of seasonal fruits	Understanding
CO4	Calculate the requirement of raw materials for processing of fruits and vegetables	Applying
CO5	Discuss the technology behind processing of fruits and vegetable products	Applying

**List of Practical's:**

- Physical properties of pulses and oil seeds
- Determination of dry and wet gluten of a given flour sample.
- Determination of Hagberg's Falling number.
- Determination of percentage impurities in grain by aspirator and seed blower.
- Pretreatments for milling of pulses
  - Application of water
  - Application of oil
  - Application red earth slurry.
  - Application of steam
- Preparation of noodles and its quality evaluation.
- Solvent extraction of selected oilseeds.
- Anatomy and structure of fruits and vegetables
- Quantitative analysis of cut fruits and vegetable yield
- Preparation of fruit and synthetic beverages
- End point determination in preparation of high sugar product (Mixed fruit jam)
- Effect of pre-treatment and process variables on quality of preserve/candied fruits
- Comparison of juice/pulp extraction methods on quality and yield of tomato pulp, ketchup/Tomato soup
- Canning and cut out analysis of fruit and vegetable
- Dehydration and rehydration of common available vegetable
- Visit to fruit, vegetable and cereal processing Industry

Title of the course : **Food Analysis and Quality Control**

Subject Code : **PCFT - 711**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course Objectives:** Objective of this course is to impart knowledge about

- The quality, quality control and their applications in food industry.
- The instrumental aspects of color and texture measuring instruments.
- The non-destructive methods and various types of chromatographic methods applied as quality control.
- Various food standards and regulations in food industry as quality control.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Discuss about the quality control and its significance in processing.	Understanding
<b>CO2</b>	Execute the knowledge of physical characteristics of food in food industries	Applying
<b>CO3</b>	Explain the working principle of instruments which are used to measure the physical characteristics of food such as Food Texture, fruit pressure, color etc	Understanding
<b>CO4</b>	Describe principle and working of non-destructive techniques and chromatographic techniques used for food analysis and quality control.	Understanding
<b>CO5</b>	Execute the knowledge of food safety and standards, role of food regulations and their implementation in food industry	Applying

Title of the course : **Packaging Technology**

Subject Code : **PCFT - 712**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Functions of packaging and familiarize them with different types of food packaging materials and their properties.
- Theory of permeability and barrier properties of different food packaging materials.
- Different food packaging equipment and machinery.
- Selecting and finalizing different types of packaging materials based on the composition and requirements of foods.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Describe the objectives, functions of packaging and select the packaging material based on requirement and properties of material.	Understanding
<b>CO2</b>	Discuss the manufacturing and characteristics of various packaging materials viz paper, glass, metal, and plastic	Understanding
<b>CO3</b>	Predict shelf life of different food materials	Applying
<b>CO4</b>	Discuss the packaging equipment and machinery and packaging systems for various types of food.	Understanding
<b>CO5</b>	Explain specialized techniques in food packaging such as Active, aseptic, controlled & modified atmospheric packaging etc.	Understanding

Unit	Main Topic	Detailed Contents	Lectures
<b>I</b>	<b>Introduction</b>	Definitions; Objectives and functions of packaging and packaging materials. Labeling types; Functions and regulations.	<b>4</b>
	<b>Properties of Packaging Material</b>	Packaging requirements and selection of packaging materials; Properties of materials such as tensile strength, bursting strength, tearing resistance, puncture resistance, impact strength, tear strength and their methods of testing and evaluation	<b>6</b>
	<b>Packaging materials</b>	(a) Paper: pulping; fibrillation and beating; types of papers and their testing methods; paper board (b) Glass: composition; properties; types of closures; methods of bottle making (c) Metals: Tinplate containers; tinning process; components of tinplate; tin free steel (TFS); types of cans; aluminium containers; lacquers	<b>8</b>

		(d) Plastics: types of plastic films; laminated plastic materials; coextrusion; edible films; biodegradable plastics	
	<b>Barrier properties of packaging materials</b>	Theory of permeability; Factors affecting permeability; Permeability coefficient; Gas transmission rate (GTR) and its measurement; Water vapour transmission rate (WVTR) and its measurement; Prediction of shelf life of foods; Selection and design of packaging material for different foods.	<b>6</b>
<b>II</b>	<b>Packaging equipment and machinery</b>	Vacuum packaging machine; Gas packaging machine; Seal and shrink packaging machine; Form-fill-seal machine; Bottling machines; Carton making machines.	<b>6</b>
	<b>Food packaging systems</b>	Different forms of packaging systems such as rigid, semi-rigid, flexible forms and different packaging system for (a) dehydrated foods (b) frozen foods (c) dairy products (d) fresh fruits and vegetables (e) meat, poultry and sea foods	<b>8</b>
	<b>Specialized techniques in food packaging</b>	Active packaging system; Retortable pouches; Aseptic packaging; Controlled and modified atmospheric packaging; Irradiation in food packaging	<b>6</b>
		<b>Total=</b>	<b>40</b>

## Books Recommended:

<b>Author</b>	<b>Title</b>
1. Frank A. Paine	A Handbook of Food Packaging
2. Stanley Sacharow and Griffin	Food Packaging
3. A.S. Athalye	Plastics in Packaging
4. Gordon L. Robertson	Food Packaging: Principles and Practice

Title of the course : **Food Analysis, Quality Control and Packaging Technology Lab**

Subject Code : **PCFT - 713**

L	T	P	Credits	Weekly Load
0	0	2	1	2

**Course Objectives:** Objective of this course is to impart knowledge about

- Carrying out proximate and physic-chemical analysis of different types of raw and processed foods.
- Different tests performed on packaging materials and filled packages.
- Calculating the shelf life of foods inside packaging materials and selection of suitable packaging materials.
- Different food packaging equipment and machinery.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Determine the proximate composition of raw and processed foods	Analyzing
<b>CO2</b>	Demonstrate the estimation of different pigments, metals and other compounds present in foods.	Applying
<b>CO3</b>	Use testing methodology to determine the characteristics of tin plates, aluminium, glass, paper and plastic used for making packages.	Applying
<b>CO4</b>	Explain the working and construction of different package filling and testing machinery	Understanding
<b>CO5</b>	Conclude the data of experiments and present clearly in reports.	Understanding

**List of Practicals:**

1. Determination of carotenoids in food sample.
2. Determination of colour value by using different methods.
3. Determination of ascorbic acid by titrimetric and photometric methods.
4. Determination of iron, phosphorous and sulphur in foods.
5. Determination of different pigments in food samples.
6. Analysis of canned and processed products available in the market.
7. Determination of FFA and acid value of given sample
8. To determine the bursting strength of a carton board.
9. To determine the amount of tin coating in a tin plate.
10. To determine Tensile strength and Young's Modulus of given material.
11. Testing of lacquered tin plate steel for following: -
  - i) Continuity of tin layer
  - ii) Resistance of lacquer to acid.
12. Determination of iron content in canned foods.

Title of the course : **Separation Technology**

Subject Code : **OEFT - 611A**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Basic understanding of the separation of various types of components for various systems.
- Familiarize the students with the separation of valuable components from the liquid, solid streams by contact equilibrium processes as well as distillation process
- Acquaint the students with theory and basis of powder technology and their classification.
- Familiar the students with new technologies of separation like super critical fluid extraction.

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Describe the basic of various separation techniques	Understanding
<b>CO2</b>	Demonstrate strong appreciation in applying the concepts and skills towards exploiting the separation techniques for diverse applications	Applying
<b>CO3</b>	Determine the number of plates in the rectifying section, stripping section of the continuous distillation system	Applying
<b>CO4</b>	Determine the optimum value of reflux ratio to achieve best quality product at minimum total cost in case of the continuous distillation system.	Applying
<b>CO5</b>	Describe the theoretical basics of powder technology	Understanding

Title of the course : **Principle of Food Processing**

Subject Code : **OEFT – 612A**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The basic concept of food processing and preservation.
- Contribution of nutrients from different food groups.
- The aspects of processing of different food groups.
- The manufacturing process of plant foods
- Emerging technologies applied to food processing

**Course Outcome:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Develop the basic concept of food processing, causes of spoilage and preservation of food.	Understanding
<b>CO2</b>	Have a concept of role of nutrients in food and human health	Applying
<b>CO3</b>	Get an overview on principles, mechanism and application of processing methods on different food groups.	Applying
<b>CO4</b>	Apply their knowledge on effect of processing on the characteristics of different food groups.	Applying
<b>CO5</b>	Understand the concepts related to emerging food processing technologies.	Understanding

Title of the course : **Principle of Food Preservation**

Subject Code : **OEFT – 612B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Objectives:** Objective of this course is to impart knowledge about

- The basic concept of food preservation.
- The factors affecting the shelf lives of commodities and different preservation techniques.
- The role of modern packaging techniques in food preservation.
- Novel technologies for food preservation.

**Course Outcome:**

On completion of the subject, the students will be able to:

<b>CO1</b>	Discuss fundamental principles of food preservation	Understanding
<b>CO2</b>	Describe the principles of low temperature preservation by refrigeration, freezing and freeze drying	Understanding
<b>CO3</b>	Explain thermal processing and execute high temperature processing in food industry	Applying
<b>CO4</b>	Explain the concept of water activity and preservation by Drying & Dehydration	Understanding
<b>CO5</b>	Implement the knowledge of preservatives, fermentation and non thermal technology in food preservation.	Applying

Title of the course : **Food and Nutrition**

Subject Code : **OEFT - 621A**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Objectives:** Objective of this course is to impart knowledge about

- Various aspects of food and nutrition
- Functions of food and nutrients.
- The dietary requirements and fulfilling the requirement from the consumption of food
- The concept behind the development of balance diet.

**Course Outcome:**

On completion of the subject, the students will be able to:

<b>CO1</b>	Describe the basic concept of food, nutrients, nutrition, health and fitness	Understanding
<b>CO2</b>	Explain the fate of food on ingestion to the body.	Understanding
<b>CO3</b>	Interpret the role of macro & micro nutrients in human health	Applying
<b>CO4</b>	Develop a dietary chart for different age groups of Indian considering RDA and interpret the effect processing on food component	Applying
<b>CO5</b>	Discuss the nutrition and alternative systems for physical fitness	Understanding

Title of the course : **Unit Operations in Food Processing**

Subject Code : **OEFT - 621B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The theory and application of basic unit operations performed in various food processing industries.
- The size reduction, and mixing operations of different types of foods necessary in the processing of foods.
- Application of the engineering principles to analyze and design the various unit operations and equipments.
- The separation of valuable components from the liquid, solid streams by physical, contact equilibrium processes as well as distillation process

**Course Outcomes:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Describe the processing of foods in terms of common unit operations like size reduction, mixing, and separation	Understanding
<b>CO2</b>	Execute his computational skills in calculating the energy required in size reduction, mixing operations	Applying
<b>CO3</b>	Discuss the construction, working and applicability of various size reduction, mixing and separation equipments.	Understanding
<b>CO4</b>	Interpret the optimum value of reflux ratio to achieve best quality product at minimum total cost in case of the continuous distillation system.	Applying
<b>CO5</b>	Explain the principle and application of leaching and extraction process.	Understanding

Food Processing Technology

Unit Operations in Food  
Processing

Title of the course : **Fundamentals of Biotechnology**

Subject Code : **OEFT-622A**

<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>	<b>Weekly Load</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>3</b>

**Course Objectives:** Objective of this course is to impart knowledge about

- The basic understanding of biotechnology and its applications.
- The fundamentals of the microbial production of scp, organic acids, vitamins, enzymes and antibiotics.
- The different techniques such as tissue culture, mutations and genetic engineering.
- The different treatment techniques for the disposal of industry waste.

**Course Outcomes:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Recognize the scientific advancements in biotechnology and its multidisciplinary nature, and its application in an industry	Understanding
<b>CO2</b>	Describe different fermentation technologies for the production of SCP, enzymes, organic acids, vitamins and antibiotics.	Understanding
<b>CO3</b>	Explain the techniques of tissue culture technique its, types of mutations, its repair mechanisms and their potential applications.	Understanding
<b>CO4</b>	Explain basic techniques used in recombinant DNA technology.	Understanding
<b>CO5</b>	Discuss the types of wastes generated from the industry and different treatment techniques applied for its disposal.	Understanding

Title of the course : **Food Laws and Regulations**

Subject Code : **OEFT-622B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The food quality, being affected from the adulterants, hazards etc and its safety.
- Different food laws and standards in India and their requirements and importance in controlling the quality
- Different international laws and regulatory agencies and their requirements and importance in controlling the quality.
- Food safety regulations and their implementation in food industry to ensure the quality and safety of the foods.
- Retail standards and other regulatory agencies and their importance in controlling the operations.

**Course Outcomes:** On successful completion of the subject, the students will be able to:

<b>CO1</b>	Know different food laws and their importance	Understanding
<b>CO2</b>	Discuss different adulterants and hazards and their safety measures	Understanding
<b>CO3</b>	Implement different safety tools and regulation in food industry to produce safe products	Applying
<b>CO4</b>	Gain knowledge of international food laws and safety regulations and their implementation criteria	Applying
<b>CO5</b>	Gain knowledge of international food laws and safety regulations and their implementation criteria	Applying

Title of the course : **Flavour Technology**

Subject Code : **OEFT -711A**

<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>	<b>Weekly Load</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>3</b>

**Course Objectives:** Objective of this course is to impart knowledge about

- Flavors regarding available materials, classification on the basis of origin, physical characteristic.
- Flavor perception on tongue and in nose;
- Flavour generation in plants and during processing
- Various analytical techniques for flavour evaluation

**Course Outcomes:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Describe current status of flavor industry and basic concepts flavor technology.	Understanding
<b>CO2</b>	Explain the changes in food flavor due to processing: Maillard rxn	Understanding
<b>CO3</b>	Discuss the interaction of flavor from lipid, carbohydrate and protein matrix in terms of retention and release	Understanding
<b>CO4</b>	Describe the criteria and methods for flavor evaluation considering the Indian standards.	Understanding
<b>CO5</b>	Select the flavor for particular food matrices	Understanding

Title of the course : **Food Plant Sanitation and Waste Management**

Subject Code : **OEFT - 711B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The basics of contamination and sanitation in food plant.
- Basic principles and types of cleaning and disinfection in food processing plant.
- Waste water treatment and solid waste disposal and management.
- Cleaning and sanitation procedure in dairy and meat industry.
- Monitoring food plant sanitation and HACCP.

**Course Outcomes:** On successful completion of the subject, the students will be able to:

CO1	Provide sanitation information needed to ensure hygienic practices in food processing and preparation operations	Understanding
CO2	Develop a working knowledge in plant and equipment design and materials, cleaners and cleaning techniques, sanitizers, monitoring cleanliness, pests and their control, HACCP and personal hygiene	Understanding
CO3	Develop ability in selecting, establishing and maintaining a suitable program of sanitation	Understanding
CO4	Explain the cleaning and sanitation procedures of different food processing plants.	Understanding
CO5	Implement water and solid waste management in food industry.	Understanding

**Mapping of Course Outcome and Program Outcome:**

Title of the course : **Fluid Flow Operation**

Subject Code : **PEFT-611A**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The theoretical concepts and application related to behaviour of fluids with respect to foods.
- With various pressure, flow and viscosity measuring devices.
- The engineering principles to understand the fluid dynamics
- With fluidization process and its application in conveyors and driers.

**Course Outcomes:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Implement the basic concepts of fluid-flow phenomena in food processing.	Understanding
<b>CO2</b>	Discuss various fluid flow theorems and implement in various flow measuring devices.	Applying
<b>CO3</b>	Explain the laminar viscous fluid flow behavior in pipes.	Understanding
<b>CO4</b>	Describe the requirements, working principle and construction of various pumps.	Understanding
<b>CO5</b>	Discuss about viscometry and determine pressure drop in fluidized bed	Applying

**Mapping of Course Outcome and Program Outcome:**

CO/PO Mapping														
(No correlation (0) / Weak (1) / Medium (2) / Strong (3) indicates strength of correlation)

<b>Average</b>	<b>3</b>	<b>2.2</b>	<b>2.4</b>	<b>2.2</b>	<b>2</b>	<b>2</b>	<b>1.4</b>	<b>0.6</b>	<b>0.8</b>	<b>1.2</b>	<b>1.6</b>	<b>1.6</b>	<b>2.2</b>	<b>1.6</b>

Unit	Main Topics	Course Outlines	Lecture (s)
<b>I</b>	<b>Introduction to fluid flow</b>	Physical properties of fluids like mass density, specific gravity, viscosity, pressure, factors affecting the rheological parameters; fluid pressure and its measurement; manometers, simple manometers, differential manometers; concept of Reynolds's number.	<b>6</b>
	<b>Fluid flow measurement</b>	Derivation of continuity equation; different types of energies of a liquid in motion; derivation of Bernoulli's equation; practical applications of Bernoulli's equation like venturi meter, orifice meter, pitot tube, rotameter. Numerical problems.	<b>6</b>
	<b>Laminar viscous fluid flow</b>	Flow of viscous fluid through circular pipe, Coefficient of friction; head loss due to Friction in pipes; head loss due to sudden enlargement, contraction, vena contract, entrance and exit losses; Stokes law (laminar flow around a sphere); laminar flow through porous media; pressure drop in flow through porous media.	<b>8</b>
<b>II</b>	<b>Pumps</b>	Types of pumps and classification criteria, Theory and working of centrifugal pump, reciprocating pumps, external gear pump (rotary pump), Lobe pump, Vane pump etc.	<b>5</b>

	<b>Viscometry</b>	Theory and working of capillary tube viscometer for Newtonian and non-Newtonian fluids; Falling sphere resistance method; Rotational viscometer; Cone and plate type viscometer; Circular disc viscometer.	<b>6</b>
	<b>Fluidization</b>	Physical properties of particles like size, shape, sphericity, porosity, superficial and interstitial velocity, hydraulic radius, equivalent diameter etc. Mechanism of fluidization, characteristics of gas – solid fluidized systems, Fanning friction factor for porous media; minimum porosity, bed weight, pressure drop in fluidized bed, theory and analysis of fluidization process; particulate fluidization; aggregative (or bubbling) fluidization; <b>principle of fluidized bed drying equipment</b> ; pneumatic conveyers. Numerical problems.	<b>9</b>
		<b>Total=</b>	<b>40</b>

Title of the course : **Post-harvest Engineering**

Subject Code : **PEFT-611B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Handling of agricultural produce soon after harvesting.
- Various types of storage system for agricultural produce.
- Design of storage system for perishable and non-perishable produce.
- Food sensing technology and its use in post-harvest management.

**Course Outcomes:** On successful completion of the subject, the students will be able to:

<b>CO1</b>	Describe the design and principle of post harvesting handling systems and factors affecting postharvest losses.	Understanding
<b>CO2</b>	Discuss the physiological changes and concept of crop process engineering.	Applying
<b>CO3</b>	Implement the concept of unit operations used in storage of fresh produces.	Understanding
<b>CO4</b>	Explain pre-treatments to control disease of fresh produces	Understanding
<b>CO5</b>	Interpret the principle of various operation used in storage of food commodities.	Applying

**Title of the course : Food Storage Engineering**

**Subject Code : PEFT- 621A**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course objectives:** Objective of this course is to impart knowledge about

- Spoilage mechanism of perishables and non-perishables and its requirements.
- Different types of handling equipments and their design.
- Design of storage structures for both perishables and non-perishables.
- Different management practices followed in storage systems.

**Course Outcomes:** On successful completion of the subject, the students will be able to:

<b>CO1</b>	Describe the engineering properties of biological materials and their importance in design of handling and storage equipments.	Understanding
<b>CO2</b>	Discuss the storage environment and its interaction with stored products.	Understanding
<b>CO3</b>	Describe the design of various handling equipments and storage structures like silos and bins.	Understanding
<b>CO4</b>	Execute the theories associated with storage structures of perishable & non-perishable food	Applying
<b>CO5</b>	Interpret the management practices followed for storage structures and godowns.	Applying

Title of the course : **Technology of Bakery and Confectionery Products**

Subject Code : **PEFT-621B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Selection of the raw material used for preparation of various bakery and confectionary products.
- Basics of various rheological properties and use of various equipment like Mixograph, RVA, Extensograph etc for measuring the properties of flour and dough.
- The basic steps and operation in preparation of Bread, Biscuits, cakes and other confectionary products..
- Basic operation and working of various equipments involved in bakery and confectionary technology.

**Course Outcomes:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Discuss the current status and raw material of bakery industry, relate the rheological properties to the quality of baked product.	Applying
<b>CO2</b>	Explain the working principle of various rheological equipment like Falling number, RVA etc.	Understanding
<b>CO3</b>	Execute the knowledge for development of various bakery products and their quality determination.	Applying
<b>CO4</b>	Describe the processing and preparation of confectionary products like fruits drops, different gums and their quality evaluations	Understanding
<b>CO5</b>	Discuss the construction and working of various equipments involved in manufacturing of bakery and confectionary products.	Understanding

Title of the course : **Health and Functional Food**

Subject Code : **PEFT-711A**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Classification of various food bioactive components showing health benefits.
- various type of health and functional foods for different aged group and alleviating chronic or lifestyle disease/disorder.
- extraction of bioactive compounds using non-thermal extraction techniques.
- effect of storage, packaging and safety of bioactive components and functional foods

**Course Outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Discuss the scope, status and importance of functional foods and nutraceuticals in India, types of functional food and their properties	Understanding
<b>CO2</b>	Explain the various physiological and biochemical aspects of life threatening and chronic diseases and effect of various bioactive components on such diseases.	Applying
<b>CO3</b>	Select the raw material and processing of bioactive components	Understanding
<b>CO4</b>	Discuss safety and legal aspects and factor affecting marketing of nutraceutical and functional food.	Understanding
<b>CO5</b>	Discuss the packaging requirements and changes during storage of bioactive components	Applying

Title of the course : **Technology of Food Plant By-product Utilization**

Subject Code : **PEFT - 711 B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The importance of waste utilization from different food processing industries.
- Design, construct, operate and manage waste treatment for biogas plant.
- The concept of by-product Management, Minimization and Utilization.
- Legal, technical and management principles for effective by product utilization.
- The best available technologies for by product processing.

**Course Outcomes:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Describe the current status of food processing waste and strategies to minimize the waste	Understanding
<b>CO2</b>	Execute the knowledge of utilization of fruits & vegetable and cereals based waste and manufacturing of various useful by-products.	Applying
<b>CO3</b>	Discuss the utilization of Meat, fish and poultry based waste and manufacturing of various useful by- products	Understanding
<b>CO4</b>	Execute the knowledge of utilization of dairy based waste and manufacturing of various useful by- products	Applying
<b>CO5</b>	Execute the knowledge of utilization oilseed processing and beverage industry based waste and manufacturing of various useful by- products	Understanding

**Course Objectives:** Objective of this course is to impart knowledge about

- Importance of beverage and status of beverage industry in India
- Different types of beverages and their formulation.
- The alcoholic beverages and their processing.
- The changes occurring during processing of both alcoholic and non-alcoholic beverages.

**Course Outcomes:** On successful completion of the subject, the students will be able to:

<b>CO1</b>	Describe status and different water treatment techniques before its utilization in beverages with quality standards.	Understanding
<b>CO2</b>	Discuss the technology of carbonated soft drinks.	Understanding
<b>CO3</b>	Execute the knowledge of processing of different types of tea and coffee and cocoa beans in food industry	Applying
<b>CO4</b>	Explain the involved technologies in production of alcoholic beverages	Understanding
<b>CO5</b>	Examine the physical, chemical and biological changes occurring in the processing and storage of both alcoholic and non-alcoholic beverages.	Analyzing

**Course Objectives:** Objective of this course is to impart knowledge about

- The industrially important microorganisms.
- The basics of fermenter and different types of fermentation processes.
- The principles of secondary metabolite production.
- Role of industrially important micro-organisms in production of fermented food products

**Course Outcomes:** On the successful completion of the course, students will be able to:

<b>CO1</b>	Report the isolation, screening and genetic improvement of industrially important microorganisms.	Understanding
<b>CO2</b>	Discuss the design and working of various type of fermentation system	Understanding
<b>CO3</b>	Describe the principle associated to production of various biomaterial by fermentation process.	Understanding
<b>CO4</b>	Explain the secondary metabolite production and their properties.	Understanding
<b>CO5</b>	Execute the knowledge to utilize and dispose the Food industry waste through Microorganism and Genetically modified microorganism.	Applying

Title of the course : **Technology of Fats and Oils**

Subject Code : **PEFT - 721B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- Composition of fats/oils and their importance and functions in foods.
- Different methods of extraction of fat/oil and different types of extractors.
- Different refining methods used for oils/fats and techniques to minimize losses.
- Hydrogenation and effect of different processing parameters on the process of hydrogenation and manufacturing technology of different fat products.
- Different chemical reactions and quality parameters to control the quality of different fats.

**Course Outcomes:**

After successful completion of this subject, the students will be able to

<b>CO1</b>	Explain the basic extraction methods by using different extractors of Fats and Oils	Understanding
<b>CO2</b>	Explain the different methods of refining and techniques to minimizes refining losses and effect of hydrogenation process	Understanding
<b>CO3</b>	Discuss the Chemistry of fats and oils and manufacturing technology of different fats and fat rich products	Understanding
<b>CO4</b>	Explain the different quality parameters of fats and oils	Understanding
<b>CO5</b>	Discuss the soap processing and its application	Understanding

Subject Code : **PEFT - 722A**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The various factors involved in the site selection and design of food plant.
- The processes involved in layout design.
- The concept of preparing cost estimate and economics
- The development and design consideration in different food industries.

**Course Outcomes:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Execute the concepts, principles and theories for the location of food processing plant.	Applying
<b>CO2</b>	Demonstrate plant layout problems by using different tools and techniques	Applying
<b>CO3</b>	Execute techniques of project planning by using scheduling methods and interpret the cost analysis	Applying
<b>CO4</b>	Implement the knowledge of materials applied for construction of food equipment and hygienic construction for food plant	Applying
<b>CO5</b>	Design and setting up of new food processing plant as entrepreneur and/or consultant.	Creating

Unit	Main Topics	Course Outlines	Lecture (s)
<b>I</b>	<b>Introduction</b>	Plant design concepts, General design considerations for food processing industries, stages of plant design	<b>3</b>
	<b>Plant location</b>	Introduction, factors involved in plant location decision, Territory and site specific factors, Influence of location on plant layout, Subjective, qualitative and semi-quantitative techniques for evaluating plant location alternatives: equal weights method, variable weights method, weight-cum-rating method, locational break-even analysis, Bridgeman's dimensional analysis, composite measure method and median model of location problem	<b>8</b>
	<b>Plant Layout</b>	Types of manufacturing process, Plant layout problem, objectives and principles of layout; classical types of layout Viz. product layout, process layout and stationary layout; plant layout tools and techniques like process charts, process flow diagram, Travel chart, machine data cards, material movement patterns, visualization of layout by templates, machine models and sketches, general guidelines for plant layout, space requirement	<b>11</b>

		for machines, work stations and storage, symbols used for plant design and layout plant layout procedures	
<b>II</b>	<b>Project Management</b>	Project planning, Techniques of project planning, Project scheduling, Methods of project scheduling: Gantt charts and Network scheduling, Basic terms, objectives and advantages of Network analysis, various Network techniques like PERT and CPM and related numerical problems	<b>6</b>
	<b>Cost Analysis</b>	Classification of costs, analysis of production costs, depreciation and different method of calculating it, break-even analysis	<b>5</b>
	<b>Plant Equipment and Buildings</b>	Materials of construction of food equipment: Characteristics of suitable construction material like Stainless steel, Aluminium, Nickel and Plastic Materials; Hygienic construction and design concepts; Types of factory buildings; Consideration in building design, drainage, ventilation and illumination in food processing industries	<b>5</b>
	<b>Layout of different industries</b>	Considerations in the layout of different types of food industries like cereal, pulses and oilseed industry, dairy Bakery, soft drinks, canning, dairy, rice and wheat mill.	<b>6</b>
		<b>Total=</b>	<b>43</b>

5. Rase and Barrow	Project Engineering of Process Plant
6. Farrall	

Title of the course : **Innovative Techniques in Food Processing**

Subject Code : **PEFT-722B**

L	T	P	Credits	Weekly Load
3	0	0	3	3

**Course Objectives:** Objective of this course is to impart knowledge about

- The concept of various novel food preservation techniques.
- Design of novel process equipments.
- Application of novel processing techniques in the preservation of foods.
- The principles behind working of various food processing techniques.

**Course Outcomes:**

On successful completion of the subject, the students will be able to:

<b>CO1</b>	Understand the membrane technology: MF, UF, NF & RO and Super critical fluid extraction process in food industry	Understanding
<b>CO2</b>	Understand the application of microwave and radio frequency wave technology in food processing	Understanding
<b>CO3</b>	Explain the working principle and advantage of high pressure processing (HPP) in food preservation	Understanding
<b>CO4</b>	Discuss the working principle and advantage of Ohmic and Radiation heating process in food processing	Understanding
<b>CO5</b>	Understand the Hurdle Technology and apply it to extend the shelf-life of food products	Applying

Title of the course : **Enzyme in Food Processing**

Subject Code : **HDFT - 611**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course Objectives:** Objective of this course is to impart knowledge about

- Enzyme, its classification, kinetics and function in foods.
- Different methods of enzyme production and purification.
- Application of enzymes in cereal and fruit and vegetable processing and milk and meat processing.
- Different method of enzyme immobilization techniques and their uses.

**Course Outcomes:** On successful completion of the subject, the students will be able to:

<b>CO1</b>	Know the different kind of enzymes and their activities	Understanding
<b>CO2</b>	Know different methods of enzyme production	Applying
<b>CO3</b>	Understand application of enzyme in cereal product and fruit and vegetable products and related benefits.	Applying
<b>CO4</b>	Know the effect of enzyme on quality of meat and milk products	Applying
<b>CO5</b>	Get knowledge of immobilization techniques and its benefits	Understanding

Title of the course : **Basic Agricultural Process Engineering**

Subject Code : **HDFT - 612**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course objectives:** Objective of this course is to impart knowledge about

- Production and consumption trends, structure, composition, quality evaluation of agricultural product
- Processing technologies for product development and value addition of various cereals, pulses and oilseeds

**Course outcomes:**

On successful completion of the subject, the students will be able to

<b>CO1</b>	Explain the harvesting methods, post harvest losses and threshing of different grains	Understanding
<b>CO2</b>	Discuss the principles and implement the various cleaning, grading operation	Applying
<b>CO3</b>	Interpret the role of moisture content and psychrometry in grain storage	Applying
<b>CO4</b>	Explain the principles of drying and different dryers and execute the drying of grains	Applying
<b>CO5</b>	Explain the principles of various material handling equipments	Understanding

Unit	Main Topics	Detailed Contents	Lectures
<b>I</b>	<b>Introduction</b>	Structure and composition of food grains, harvesting-optimum stage of harvest, methods of harvesting, post harvest losses in durable and perishable crops.	<b>5</b>
	<b>Threshing</b>	Types of threshers, types of threshing cylinders, working principles and their operation. Shelling and decortication principle of operation. maize shellers, groundnut decorticator - hand operated and motorised.	<b>8</b>
	<b>Cleaning and grading</b>	Principles, particle motion during screening, screen openings, ideal and actual screens, effectiveness of screen, types of cleaners and graders; Air-screen cleaner-design consideration of an air screen cleaner, disk separator, Indented cylinder separator, Spiral separator, magnetic separator, colour sorter, specific gravity separator, cyclone separator -efficiency of separation - performance index	<b>8</b>
<b>II</b>	<b>Moisture content &amp; Psychrometry</b>	Methods of determination, direct and indirect methods, equilibrium moisture content, sorption isotherm, Properties of air, water vapour mixture, humidification, dehumidification-psychrometry applied for food grains.	<b>10</b>
	<b>Drying</b>	Principles, thin layer drying, constant - rate and falling-rate period of drying, rate period of drying, effect of different factors on drying process, deep bed drying. Methods of mechanical drying depending on modes of heat transfer. Grain dryers - Types of mechanical dryers, Batch type and continuous types.	<b>8</b>
	<b>Material handling and storage</b>	Types of handling and conveying systems for agricultural products and their design - belt conveyor, screw conveyor, bucket elevators and pneumatic conveyors. Storage - conditions for safe storage of durable commodities. Bag and bulk storage- Design of silos and storage structures.	<b>8</b>

1. Sahay & Singh      Unit Operation in Agricultural Processing
2. Chakraverty, A.      Postharvest Technology of Cereals and Pulses.

Title of the course : **Instrumental Techniques in Food**

Subject Code : **HDFT - 621**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course Objectives:** Objective of this course is to impart knowledge about:

- The fundamentals of chromatography and spectroscopy principles, instrumentation and advantages and disadvantages of the techniques
- Data acquisition, interpret measurements and perform qualitative and quantitative analysis on selected foods.
- Matrix effects.
- The performance of these techniques for rapid and routine analysis as compared to reference methods.

**Course Outcomes:** On successful completion of the subject, the student will be able to

<b>CO1</b>	Define key terms related to qualitative and quantitative physical and chemical food analysis.	Analyzing
<b>CO2</b>	Describe approaches necessary in sampling of food prior to its analysis.	Applying
<b>CO3</b>	Describe the basic principles underlying analytical techniques associated with food analysis.	Analyzing
<b>CO4</b>	Describe physical and chemical techniques necessary for chromatographic analysis and analytical instrumentation of food constituents.	Analyzing
<b>CO5</b>	Demonstrate practical proficiency in a food analysis laboratory and critique the advantages and disadvantages of one method of food analysis versus another and select the appropriate instrumental procedure and course of action for a food analysis problem.	Analyzing

Title of the course : **Food Biochemistry and Nutrition**

Subject Code : **PCFT- 521 / MDFT - 521**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course objectives:** Objective of this course is to impart knowledge about

- Concept of human food requirements and digestion.
- Best use of available nutrients in order to full fill the requirements of balanced diet for the consumers.
- The role of safe food in health promotion and disease prevention
- The nutritional daily requirements of various age groups as per ICMR, FA

**Course outcomes:** On successful completion of the subject, the students will be able to:

<b>CO1</b>	Demonstrate the role of enzymes and their importance in food biochemical processing and food digestion.	Understandings
<b>CO2</b>	Describe about the chemical/biochemical properties and metabolic pathways of carbohydrates, lipids, and proteins.	Understandings
<b>CO3</b>	Familiarize/interprets various aspects of food nutritional requirements for health sustainability and concept of balance diet	Applying
<b>CO4</b>	Elaborate/apply about the techniques used to calculate protein quality, dietary allowances of different people and techniques of nutritional assessment	Applying
<b>CO5</b>	Describe and demonstrate the society to develop preventive measures for balanced diet and eradication of malnutrition.	Applying

<b>I</b>	<b>Enzymes</b>	Enzymes nomenclature and classification, factors effecting enzyme activity, active site of enzyme, co-enzymes, co-factors, iso-enzymes, specificity of enzymes, enzyme inhibition and activation, mechanism of enzyme action, enzyme thermodynamics, enzyme kinetics, enzyme applications	<b>10</b>
	<b>Metabolism of carbohydrates</b>	Digestion and absorption, major pathways of carbohydrates metabolism (glycolysis, gluconeogenesis, Kreb's cycle, glycogenesis, glycogenolysis), galactose and fructose metabolism, Disorders of carbohydrate metabolism	<b>12</b>
	<b>Metabolism of lipids</b>	Digestion and absorption, $\beta$ -oxidation of fatty acids, Biosynthesis of fatty acids and triacylglycerol. Functions of lipids in the diet.	<b>9</b>
<b>II</b>	<b>Metabolism of Proteins</b>	Digestion and absorption, amino acid pool, nitrogen balance, metabolism of amino acids (general aspects, deamination, transamination),	<b>10</b>

		metabolism of ammonia, Biosynthesis of protein, urea cycle, disorders of amino acid metabolism.	
	<b>Biological Oxidation</b>	Bioenergetics, high energy compounds, biological oxidation, electron transport chain, oxidative phosphorylation and inhibitors. Shuttle pathways	<b>6</b>
	<b>Food Nutrition</b>	Functions and energy values of foods, basal energy metabolism: BV, NPU, BMR, PER calculations, dietary allowances and standards for different age groups, nutritive value of Indian food, techniques for assessment of human nutritional status, balance diet Causes and preventions of malnutrition.	<b>14</b>
<b>Total</b>			<b>61</b>

Title of the course : **Plant Food Product Technology**

Subject Code : **MDFT - 611**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course objectives:** Objective of this course is to impart knowledge about

- Milling of cereals & pulses and bakery products
- Extrusion & extruded products and oilseed processing
- Processing of fruits, vegetables and spices

**Course outcomes:** On successful completion of the subject, the students will be able to:

<b>CO1</b>	Explain the factor affecting the shelf life of product	Understanding
<b>CO2</b>	Discuss milling of cereals & pulses and bakery products	Understanding
<b>CO3</b>	Describe the extrusion and extruded products	Understanding
<b>CO4</b>	Explain the processing of oilseeds	Understanding
<b>CO5</b>	Describe Processing of fruits, vegetables and spices	Understanding

**Mapping of Course Outcome and Program Outcome:**

CO/PO Mapping														
(No correlation (0) / Weak (1) / Medium (2) / Strong (3) indicates strength of correlation)														
COs	Programme Outcomes (POs)												Program Specific Outcomes (PSO)	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

<b>Average</b>	<b>1.8</b>	<b>2.2</b>	<b>1.6</b>	<b>2</b>	<b>0.8</b>	<b>1.2</b>	<b>1.4</b>	<b>0.4</b>	<b>0.8</b>	<b>1.4</b>	<b>1.6</b>	<b>1.6</b>	<b>2.2</b>	<b>2</b>

Unit	Main Topics	Detailed Contents	Lectures
<b>I</b>	<b>Introduction</b>	Scope and importance of food processing- Properties of food- Physical, thermal, mechanical, sensory. Characteristics of tissues and non-tissues foods, Degree of perishability of unmodified foods, Causes of quality deterioration and spoilage of perishable foods, intermediate moisture foods, wastage of foods	<b>8</b>
	<b>Milling of cereals &amp; pulses and bakery products</b>	Milling operations for cereals and pulses, various types of improved machinery employed in rice and other grain milling, advances in baking technology, recent development in bakery ingredient and their functionality.	<b>8</b>
	<b>Extrusion and extruded products</b>	Principle of extrusion, advances in extrusion and co-extrusion processes, advances in extruded and other ready to eat food products e.g. Roasted toasted and fried products, instant ready to use formulations,	<b>8</b>
<b>II</b>	<b>Processing of oilseeds</b>	Processing of oilseeds for oil and protein products, advances in oil processing, recent modification in oil,.	<b>4</b>
	<b>Processing of fruits, vegetables and spices</b>	Fruits and vegetable processing, Recent trends in fruits and vegetables preservation and processing techniques, Fruits and vegetable-based products, processing of common dry spices and possible adulterants identification.	<b>12</b>
<b>Total=</b>			<b>40</b>

**Books Recommended:**

2. P.J Fellows	Food Processing and Preservation
3. M.Shafeiur Rahman	Food Processing Technology: Principles and Practice
4. Khetarpaul N	Food Processing and Preservation

Title of the course : **Unit Operations in Food Engineering**

Subject Code : **MDFT - 621**

L	T	P	Credits	Weekly Load
3	1	0	4	4

**Course Objectives:** Objective of this course is to impart knowledge about

- The theory and application of basic unit operations performed in various food processing industries.
- The size reduction and mixing operations of different types of foods necessary in the processing of foods.
- The engineering principles to analyze and design the various unit operations and equipments
- The separation of valuable components from the liquid, solid streams by physical, contact equilibrium processes as well as distillation process

**Course Outcomes:** On successful completion of the subject, the students will be able to:

<b>CO1</b>	Describe and discuss the processing of foods in terms of common unit operations like size reduction, mixing, and separation.	Analyzing
<b>CO2</b>	Apply computational skills in calculating the energy required in size reduction, mixing operations.	Applying
<b>CO3</b>	Understand the construction, working and applicability of various size reduction, mixing and separation equipments.	Analyzing
<b>CO4</b>	Analyse the optimum value of reflux ratio to achieve best quality product at minimum total cost in case of the continuous distillation system.	Analyzing
<b>CO5</b>	Able to understand the principle and application of leaching and extraction process.	Analyzing

**Mapping of Course Outcome and Program Outcome:**

CO/PO Mapping (No correlation (0) / Weak (1) / Medium (2) / Strong (3) indicates strength of correlation)														
COs	Programme Outcomes (POs)												Program Specific Outcomes (PSO)	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Unit	Main Topic	Detailed Contents	Lectures
<b>I</b>	<b>Introduction</b>	Definition and application in food processing.	<b>2</b>
	<b>Size reduction</b>	Theory of comminution, Rittinger's law, Kick's law, Bond's law and their applications in calculation of energy required in grinding, Crushing efficiency, Size reduction equipment used in food industry.	<b>6</b>
	<b>Mixing</b>	Theoretical aspects of solid mixing. Mixing index, rate of mixing, Theory of liquid mixing, Equipment for liquid and solid mixing.	<b>6</b>
	<b>Sieving</b>	Separation based on size, Effectiveness of screens, Types of screens, Factors affecting the sieving process, Fineness modules and particle size distribution	<b>6</b>
	<b>Sedimentation</b>	Theory, Gravitational sedimentation of particles in liquids and gases, Sedimentation equipment.	<b>4</b>
<b>II</b>	<b>Centrifugal separation</b>	Basic equation, centrifugal clarification, Equipments.	<b>4</b>
	<b>Filtration</b>	Theoretical aspects, Fundamental equation for filtration, Filtration equipment.	<b>5</b>
	<b>Crystallization</b>	Rate of crystallization, crystallization equilibrium.	<b>4</b>

	<b>Distillation</b>	Liquid vapor equilibrium, distillation of binary mixtures, simple distillation, continuous distillation, flash distillation, steam distillation.	<b>6</b>
	<b>Leaching and extraction</b>	Gas – Liquid equilibria, Solid – Liquid equilibria, Extraction-Solid Liquid extraction, Liquid-Liquid extraction, stage equilibrium extraction.	<b>6</b>
		<b>Total=</b>	<b>48</b>

**Title**

- Food Processing Technology  
Unit Operations in Food Processing

Title of the course : **Engineering Properties of Foods**

Subject Code : **MDFT - 711**

<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>	<b>Weekly Load</b>
<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>	<b>4</b>

**Course Objectives:** Objective of this course is to impart knowledge about

- The various engineering properties of biomaterials.
- The measuring /determination of the various engineering properties of biomaterials.
- The application of engineering properties in designing process equipment.

**Course outcomes:** On successful completion of the subject, the students will be able to

<b>CO1</b>	Acquire knowledge on various engineering properties of biomaterial/food materials.	Analyzing
<b>CO2</b>	Acquire knowledge on techniques of measurement/determination of engineering properties.	Analyzing
<b>CO3</b>	Acquire knowledge on engineering properties of biomaterials and its application in designing of process equipments and storage structures.	Analyzing
<b>CO4</b>	Acquire knowledge on engineering properties of biomaterials and its application in the development of novel food processing techniques.	Analyzing
<b>CO5</b>	Acquire knowledge on engineering properties of biomaterials and its application in the quality control of processed food products.	Analyzing

## B.E. (Food Tech) Course Scheme and Syllabus

Unit	Main Topic	Detailed Contents	Lectures
<b>I</b>	<b>Introduction</b>	Biomaterials and their properties in relation to processing, their role in the development of new products and processes.	<b>4</b>
	<b>Physico-Chemical Characteristics</b>	Physico-chemical characteristics: Definition, concept and understanding of shape, sphericity, size, volume, density, porosity, surface area, coefficients of friction, and angle of repose of food materials. Various techniques used in the measurement/determination of engineering properties. Influence of proximate composition/ chemical constituents on physical properties of food materials and its influence in processing and design of process equipments.	<b>8</b>
	<b>Mechanical and Rheological Properties</b>	Flow behaviour properties of food materials: definition and concept in general and detailed understanding on granular and powdered food materials. Textural profile analysis and interpretation of data of food products using various types of food texture analyzer and interpretation of data. Mechanical damage on food its significance in causing biological and chemical reactions. Mechanical damage: detection and interpretation of data. Static and dynamic resistance to mechanical damage: comparison and evaluation. Impact damage: damage under dead load, vibration damage-stress cracking.	<b>8</b>
	<b>Aero and hydrodynamic</b>	Drag coefficients, terminal velocity in agricultural materials: definition, concepts understanding. Determination/measurement of aero and hydrodynamic properties. Application of aero and hydrodynamic properties: processing, handling of agricultural produce and designing of process equipments.	<b>7</b>
<b>II</b>	<b>Thermal, Electrical and</b>	Specific heat, thermal conductivity, thermal diffusivity, electrical resistance and conductance, dielectric constant, reflectivity, transmittivity and absorbtivity of incident rays:	<b>7</b>

	<b>Optical Properties</b>	definition, concepts understanding. Determination/measurement of thermal, electrical and optical properties of agricultural materials/biomaterials. Application of thermal, electrical and optical properties: processing, handling of agricultural produce and designing of process equipments.	
	<b>Applications</b>	Application of engineering properties in process development as well as design and operation of equipment and structures associated with handling, processing and storage of raw as well as processed food products and applications in the development of novel processing techniques.	<b>6</b>
		<b>Total=</b>	<b>40</b>
